All of the teachers in my school are going to do these [lessons this week](#). Besides being a science teacher, I am also a Community Emergency Response Team (CERT) trainer and have been developing a program called Ready Together! Organize your Block for Disaster Preparedness. It's a 4 part class and needless to say we got a major redirect from earthquakes and fires after the first session. I am trying to weave a little of that into the science classes.

The PPT also shows you the format we use for the weekly lesson, FAQs,

The lessons:

[Lesson 1: Grocery Disinfection Challenge!](#)

[Lesson 2: Grow some food!](#) [Lesson 3: Won't You Be My Neighbor?](#)

[Lesson 4: Beyond Hoarding Toilet Paper! The Issue with Tissue](#)

I am going to make a video for the students to walk them through the emergency contact and neighbor sheets in Lesson 3. So check back. Accommodated and modified versions of the toilet paper article, lesson 4, are forthcoming.
